

**DESCRIPTION**

M54564P and M54564FP are eight-circuit output-sourcing Darlington transistor arrays. The circuits are made of PNP and NPN transistors. Both the semiconductor integrated circuits perform high-current driving with extremely low input-current supply.

**FEATURES**

- High breakdown voltage ( $BV_{CEO} \geq 50V$ )
- High-current driving ( $I_o(max) = -500mA$ )
- With output pulldown resistance (Driving available with fluorescent display tube)
- Driving available with PMOS IC output or with TTL output
- Wide operating temperature range ( $T_a = -20$  to  $+75^{\circ}C$ )
- Output current-sourcing type

**APPLICATION**

Drives of relays, printers, LEDs, fluorescent display tubes and lamps, and interfaces between MOS-bipolar logic systems and relays, solenoids, or small motors.

**FUNCTION**

The M54564P and M54564FP each have eight circuits, which are made of input inverters and current-sourcing outputs. The outputs are made of PNP transistors and NPN Darlington transistors. The PNP transistor base current is constant. Resistance of  $50k\Omega$  is connected between each output pin and GND, making these ICs suitable for fluorescent display tubes. Vs and GND are used commonly among the eight circuits.

Output current is 500mA maximum. Supply voltage Vs is 50V maximum.

The M54564FP is enclosed in a molded small flat package, enabling space-saving design.

**PIN CONFIGURATION**

Package type 18P4G(P)

Package type 20P2N-A(FP)

NC : No connection

**CIRCUIT DIAGRAM**

The eight circuits share the Vs and GND.

The diode, indicated with the dotted line, is parasitic, and cannot be used.
